EDUCATION

California Polytechnic State University - San Luis Obispo, CA **June 2026**

Bachelor of Science in Computer Science | *Minor in Bioinformatics*

Relevant Coursework: Software Engineering, Databases, Operating Systems, Networks, Algorithms, Artificial Intelligence Object-Oriented Programming, Web Development, Data Structures, Data Science

EXPERIENCE

Homigo **Remote**

Software Engineer *December 2025 - Present*

- Build a **bilingual, mobile-responsive contractor onboarding platform** supporting **20 service categories,** enabling providers to complete signup, phone verification, service selection, travel radius setup, and Stripe payout onboarding through a guided multi-step workflow.
- Automate **provider service-area setup** by translating ZIP codes, travel radius, and selected services into marketplace coverage mappings using **Next.js, TypeScript, Supabase, Stripe, Twilio, SendGrid, and Google Cloud Vision API,** reducing manual configuration while improving onboarding, communication, and content moderation.

Veggie Rescue **San Luis Obispo, CA**

Software Engineer *December 2025 - Present*

- Lead development of a **food distribution dashboard serving 70+ nonprofit organizations,** replacing **fragmented spreadsheet tracking** with a centralized **React, TypeScript, Express,** and **Google Sheets API** workflow.
- Design a **priority-based delivery queue** that helps staff make **faster and fairer food allocation decisions** by ranking organizations using delivery history, pounds received, recipient priority, and urgency data.

Tesla (Industry Collaboration via Systems Optimization Club) **San Luis Obispo, CA**

Software Developer Student Consultant *October 2025 - March 2026*

- Centralized **Tesla employee commute planning** into a **React Native mobile prototype,** helping users compare driving, biking, public transit, and shuttle routes through one unified trip planning experience.
- Refactored **hardcoded mobile styles** into a **custom theming system and reusable components** using **React Native** and **Google Maps API**, improving **UI consistency and long-term maintainability**.

Hack4Impact **San Luis Obispo, CA**

Full Stack Developer *October 2024 - June 2025*

- Shipped **full-stack messaging and announcement workflows** for a **nonprofit tree inventory platform**, connecting **Next.js, MongoDB, and REST API routes** to help admins send updates to all users, admins, or selected volunteers.
- Enhanced **volunteer data management** by creating tree entry, inventory table, and **mobile-responsive message interfaces** using **Next.js and Chakra UI**, helping volunteers collect, view, and manage heritage tree records efficiently.

TECHNICAL PROJECTS

IBD Clinical Decision Support System | React Native, TypeScript, Supabase, PostgreSQL, Flask

- Created a **mobile clinical decision support workflow** that organizes **patient symptoms, medication history, and genetic inputs** through a **React Native app** connected to a **Flask recommendation backend** using **REST APIs, Supabase, and PostgreSQL.**
- Improved **clinical review support** by prototyping **LLM-powered insight features** that summarize symptom trends, explain recommendation outputs, and generate doctor-facing questions from structured patient context.

OncoGraph: Cancer Gene Discovery Pipeline | *Python, FastAPI, NetworkX, Scikit-learn, PostgreSQL, Docker, Next.js*

- Transformed a **Python graph script** into a **reproducible FastAPI bioinformatics pipeline** for prioritizing **candidate tumor-related genes** using **Random Walk with Restart, p-value simulations, PostgreSQL, and Docker Compose.**

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, JavaScript, SQL, HTML/CSS, C

Libraries / Frameworks: React, Next.js, React Native, Expo, Node.js, Spring Boot, Flask, FastAPI

Tools / Databases / Cloud: Git, Docker, Postman, Jira, PostgreSQL, Supabase, Firebase, AWS, Vercel
