EDUCATION

California Polytechnic State University - San Luis Obispo, CA **June 2026**

Bachelor of Science in Computer Science | *Minor in Bioinformatics*

Relevant Coursework: Software Engineering, Databases, Operating Systems, Networks, Algorithms, Artificial Intelligence

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, JavaScript, SQL

Tools: React, Next.js, React Native, HTML/CSS, Tailwind CSS, REST APIs, PostgreSQL, MongoDB, MySQL, Supabase, Git

EXPERIENCE

Homigo **Remote**

Software Developer *December 2025 - Present*

- Build a mobile-responsive onboarding platform using **React, Next.js, TypeScript, and Tailwind CSS,** enabling **15+ early users** to sign up, submit required information, and complete contractor onboarding workflows.
- Develop backend integrations using **Supabase (PostgreSQL)** and **REST APIs** including **SendGrid** for contact workflows and **Google Cloud Vision** for image moderation, improving content validation and overall data handling.

Veggie Rescue **San Luis Obispo, CA**

Software Developer *December 2025 - Present*

- Design and implement a food distribution dashboard using **React** and **Google Sheets** data integration, giving **70+ nonprofit organizations** near real-time visibility into deliveries and reducing manual tracking across spreadsheets.
- Create a priority-based delivery queue and reusable dashboard table components to help staff decide which organizations receive food next, improving fairness in distribution and reduce decision-making time.

Tesla **San Luis Obispo, CA**

Software Developer Consultant *October 2025 - March 2026*

- Implemented a custom theming system in React Native for a mobile trip planning app used by Tesla employees to compare commute options, replacing hardcoded styles and improving UI consistency and maintainability.
- Integrated full-screen map interface using the **Google Maps API** and structured **5+ reusable UI components** for the app, enabling users to view commute routes and improving navigation experience across transportation options.

Hack4Impact **San Luis Obispo, CA**

Full Stack Developer *October 2024 - June 2025*

- Supported a web platform for the Central Coast Heritage Tree Foundation that allows volunteers to track and manage tree inventory data, connecting **Next.js and MongoDB** via **REST APIs** to handle tree records and announcements.
- Improved interactive table and map interfaces using **Chakra UI**, adding sorting, search, and data visibility features to help volunteers manage and explore **100+** heritage tree records more efficiently in the field.

TECHNICAL PROJECTS

Virgil – IBD Patient Stratification and Mobile Health App | React Native, TypeScript, Supabase, PostgreSQL

- Engineered a mobile health app to track patient data and identify trends for IBD patients.
- Constructed a pipeline that links symptoms to genes and suggests treatments using clinical data and LLMs.

Luma Leaf - Online Photobooth | *React, Next.js, TypeScript*

- Enabled real-time camera capture with session-based state management, generating photo strips across devices.
- Handled time-limited QR sharing with optimized media handling, ensuring smooth cross-device performance.

Focus OS - Pomodoro Focus Tracker | *React, Express.js, PostgreSQL*

- Delivered a productivity tool for task tracking, helping users stay focused through structured work sessions.
- Managed session persistence with APIs and database models, enabling timers to resume after refresh.
